## Top 6 Action Steps to Reduce Payments Fraud

### Fraud is a growing threat - in both good times and bad

Despite organizations recognizing the threat and actively implementing controls to reduce payments fraud, tactics are becoming more sophisticated and success more frequent.

# 4%

*Only four percent of perpetrators have a prior fraud conviction*

**Both economic growth and recession scenarios contribute to the increase in fraudulent activity.**

In good times new hires take advantage of lax recruitment practices put in place to fill positions quickly. In recessionary times controls are often bypassed or overridden as current staff struggle to manage increased workloads.

According to the 2019 AFP Payments Fraud and Control Survey, “more than 80 percent of financial professionals report that their organizations were targeted by fraudsters in 2018, the largest percentage since the Association of Financial Professionals® (AFP) began tracking such activity” in 2005.

The Association of Certified Fraud Examiners (ACFE) found that occupational fraud (using one’s occupation for personal gain) cost businesses over \$7 billion in just 21-months.

At an average of \$130,000 per case and an elapsed time of 16 months before a scheme is discovered, an estimated 50% of fraud cases can be directly attributed to a lack of internal controls.

This highlights the need for businesses to increase focus on protecting their bottom line by implementing and maintaining controls - especially during periods of rapid economic growth where oversight of indirect spend tends to be less rigid.

## Top 6 Action Steps to Reduce Payments Fraud

### Managing indirect vs. direct spend

Both direct and indirect spend is critical to business operations. Direct spend—direct cost or direct procurement— involves spending related to the goods, materials, and services directly related to the production of products and/or services offered by a business.

Indirect spend, on the other hand, refers to administrative or internal expenses incurred to operate the company. These may include the costs associated with facilities, utilities, office equipment and supplies, travel expenses, and similar items.

Indirect Spend as a % of Annual Revenues

While most companies use sophisticated enterprise resource planning (ERP) and supply chain management (SCM) software to monitor and control their direct spend, it's in the area of indirect spend that cost control and risk mitigation are often overlooked.

Generally accounting for 15-27% of a company's total revenue, indirect spend is where the majority of occupational fraud takes place.

### Exposing fraud across purchase to pay functions

According to the ACFE report, small businesses lose—for each case—almost twice as much to fraud as do large companies, at a median loss of \$200,000 per incident.

Employees who have been with their company for more than five years tend to defraud them of twice the amount as employees with less than five years' tenure.

Since the fear of bad publicity often prevents companies from pressing charges, the majority of these businesses rarely—if ever—recoup their losses.

While not all P2P fraud reaches the heights of Evaldas Rimasauskas and his compatriots who tricked Google and Facebook into wiring them over \$100 million between 2013 and 2015 with business e-mail compromise (BEC), fraud can have a significant impact on a business, no matter the size.

Here are some examples:

#### The superintendent and the wife

In one Massachusetts' school, the superintendent conspired with his wife to defraud the school system . While she formed a distributorship for office and cleaning supplies, he used his position to ensure all procurement went through her business. She took the orders, bought the goods from Home Depot and Office Depot, and marked them up by 20%.

If not for the sharp eyes and courage of another school employee who saw her delivering supplies to the school, the fraud may have continued for much longer.

## Top 6 Action Steps to Reduce Payments Fraud

### The shipping manager and the packaging company

When a consumer goods company terminated a product line requiring specific packaging, the shipping manager falsified orders. When the boxes arrived, he sent them for recycling and pocketed the income.

Eventually, he got greedy, plotting with the packaging company to stop shipping the boxes and splitting the profits. The mistake he made was arriving at work in a Porsche, triggering an investigation.

### The manager and the accountant

Between 2011 and 2013, the manager of a large healthcare organization—with over 500 locations and thousands of SKUs—colluded with an accounting clerk, defrauding the institution of over \$1.4 million.

They set up a phantom company tied to an ACH account and invoiced varying amounts under \$10,000 (the audit threshold) in no specific pattern with different vendor numbers.

It was only after both had left the company that late payment demands were researched and the fraud discovered.

### Identifying attempts to conceal fraud

According to ACFE, 97% of cases include efforts to hide the fraud. The top eight methods used are:

Creating fraudulent physical documents	55%
Altering physical documents	48%
Creating fraudulent transactions in accounting system	42%
Altering transactions in the accounting system	34%
Altering electronic documents or files	31%
Destroying physical documents	30%
Creating fraudulent electronic documents or files	29%
Creating fraudulent journal entries	27%

### Pinpointing the root causes of fraud

In a purchase to pay environment, both procurement and payment processes are susceptible to fraud. As the previous examples highlight, these include:

#### Phantom vendors

Often colluding with third parties, occupational fraudsters approve purchase orders, vendor master changes, and payments on behalf of non-existent or fake suppliers.

#### Impersonation

The fraudster sends official-looking correspondence—or makes a phone call in person—representing a genuine supplier and requesting a bank account or address change to redirect payments.

While fraud of this nature may have a relatively short lifespan before payment demands arrive from the real supplier, large amounts may have already have been siphoned off from company funds.

#### Dormant POs

Inactive purchase orders with outstanding balances may be reopened by insiders, the bank account changed, and fraudulent invoices submitted against the PO. As long as amounts remain below the audit threshold, fraud of this type may remain undetected indefinitely.

#### Fake invoices

One-off invoices may be submitted to exploit the lack of controls required to manage the exception process. In many cases, the unsuspecting accounts payables clerk will create a new vendor record to make the payment without verifying the vendor or goods received.

#### Multiple Methods

All these forms of fraud can be traced to inadequate controls in the areas of indirect purchasing, account payables, vendor management, human data entry, and audits.

Addressing these areas reduces the risk of your being one of the over 50% of companies who experience losses due to fraud each year.

Fraud can be traced to inadequate controls in the areas of:

- indirect purchasing
- account payables
- vendor management
- human data entry
- audits

### 6 Steps You Can Take to Prevent Fraud

According to ACFE's findings, "fraudsters tend to start small and increase their frauds rapidly over the first three years."

Frauds detected using proactive IT controls tend to last five months with average losses of only \$39,000, while schemes that went undetected jumped to almost \$1 million at the two-year mark.

# \$850,000

It's interesting to note that while fraud by owners or executives comprises only a relatively small percentage—19%—of all cases of fraud, the average loss per case amounts to \$850,000.

#### 1. Close the gap

Control spend with 100% purchase utilization, partnering with purchasing to enforce vendor vetting, the input of PO and contract numbers for traceability—including for one-off purchases.

#### 2. Automate data capture

Implement enhanced requisitioning and purchase order matching with an automated data capture system that's accurate, inexpensive, and easy to deploy, reducing human touchpoints and increasing accuracy.

Capturing invoice data with software also reduces the amount work involved with keying data manually.

#### 3. Implement workflows

Enforce controls through catalogs, punchouts, workflow, and permissions to prevent data from being entered, altered, or deleted without authorization, ensuring audit trails are in place to track all changes.

#### 4. Enforce multi-level approvals

Impose a multi-person approvals matrix for all payments as part of the standard workflow, reducing dependence on a single individual for authorization.

#### 5. Transform audit processes

Change audits from being based on line item amounts to random samplings independent of monetary value or time, increasing the chance of quickly identifying fraudulent activities. ACFE's research indicates that implementing surprise audits reduces losses in 51% of cases, and resulted in faster detection of attempted fraud 52% of the time.

#### 6. Use intelligence

Leverage AI to detect patterns, irrespective of fraud schemes or time elapsed. According to ACFE, data monitoring and analytics accelerates detection by 58% and reduces losses by 52%.

## Control indirect spending with Purchase Requisition Automation from Rillion

Rillion's comprehensive solution for indirect purchasing comes complete with all the tools you need to ensure compliance:

- Handles both internal and external purchase orders
- Automated approval workflows reduce invoice cycle times and eliminate the reliance on email and spreadsheets
- Automated 3 way matching of invoices, purchase orders and goods receipts takes the drudgery out of manual matching
- A complete time-stamped audit trail helps both internal and external investigations
